

ACTIVITY ABOVE AND BELOW DURING A NIGHT SESSION LINCOLN LAKE CO.

FRONT COVER: BEN HOBERG ON STANLEY KUBRICK V12 CLEAR CREEK CANYON CO.

Kinetic energy is the energy of an object or body in motion. At Kinetik we seek to be a company in constant motion, always evolving, like the sport we love. From our humble beginning in the dining room of a Southern Illinois home, we have been constantly pushing the sport of climbing forward through innovation, ethics and unmatched quality. We do not compromise when it comes to our products. We started designing climbing gear so that we can make it better and then make it better than that. Designing a product that fundamentally changes how we interact with our gear is like a first ascent to us. So, join us, and see what we come up with next...

KINETIK

THE NEWTON SERIES

“Absolutely brilliant flap system that covers the hybrid hinge and backpack straps when open and provides a safe cocoon for gear when packed up”

-Climbing magazine Feb. 2012

NEWTON:

noun AbbrN

Absolute unit of force. It is defined as the force necessary to provide a mass of 1 kg with an acceleration of 1 m per second per second. It is named for Isaac Newton, whose second law of motion describes the changes a force can produce in the motion of a body.

The Newton a measure of energy in motion. We gave this name to our series of bouldering pads because we believe that bouldering pad should always be moving forward and improving in what it offers to the climber in both features and protection. We made a pad that offers not only the best foam on the market but also three features that we were the first to include. First a waterproof vinyl bottom that cover and protects carry system from mud and debris. Second, on our two larger pads, the newton and kilonewton we include load stabilizers to make the pad more stable on the back, which is important when scrambling over talas. Third ability to carry a second pad of the same size or smaller with out accessories. In the case of the Kilonewton it can carry a newton and micronewton at the same time. We are just getting started...

INETIK

“Kinetik is a newcomer to the crashpad game, and the company absolutely killed it with their flagship pad, the Newton”
Urbanclimber 2011 crashpad review

NEWTON

MSRP: \$225.00 USD

Size: 48”x36”x 4.0”

The newton is the work horse of the Kinetik line. We use three different densities of foam for the best impact and catch qualities.

Features:

- Hybrid Hinge Design
- Closure flap protects pack area from ground
- Closure flaps fold out of the way during use
- Can carry additional Newton or MicroNewton (smaller pad) without additional straps or flaps
- Padded shoulder straps with adjustable sternum strap
- Adjustable shoulder strap height.
- Two drag handles and one carry handle

MICRONEWTON DELUXE

MSRP: \$140.00 USD

Size: 36"x30"x 3.0"

The MicroNewton is the smallest pad in the Kinetik quiver. It makes a great circuit pad, recon pad or additional pad to your Newton or KiloNewton set up. It has a 2 layer foam matrix with a solid sheet of closed cell foam over the top of industry leading open cell foam.

Features:

- Hybrid Hinge Design
- Auto Upholstery top panel for shoe cleaning
- Waterproof material protects pack area from ground
- Closure flaps fold out of the way during use
- Can carry additional MicroNewton without additional straps or flaps
- Padded shoulder straps with adjustable sternum strap
- Adjustable shoulder strap height.
- Two drag handles and one carry handle

Shown with Forest green upholstery and regatta blue 1000D Nylon

NEWTON DELUXE

MSRP: \$240.00 USD

Size: 48"x36"x 4.0"

The Deluxe newton is an upgraded version of the newton. We add waterproof vinyl to the bottom for added protection from mud and water and easy cleaning. We also add auto upholstery carpet to clean your shoes

Features:

- Hybrid Hinge Design
- Auto Upholstery top panel for shoe cleaning
- Waterproof Vinyl protects pack area from ground
- Closure flaps fold out of the way during use
- Can carry additional Newton or MicroNewton (smaller pad) without additional straps or flaps
- Padded shoulder straps with adjustable sternum strap and load stabilizers
- Adjustable shoulder strap height.
- Two drag handles and one carry handle

Shown with Navy 1000D and Red Upholstery

XINETIK

KILONEWTON DELUXE

MSRP: \$325.00 USD

Size: 56"x48"x 5.0"

The Kilonewton is the largest pad in the Kinetik line. We use 4 inches of dense open cell foam under our 1" closed cell for the best highball performance .

Features:

- Hybrid Hinge Design
- Auto Upholstery top panels for shoe cleaning
- Waterproof material protects pack area from ground
- Closure flaps fold out of the way during use
- Can carry additional KiloNewton,Newton or MicroNewton without additional straps or flaps
- Padded shoulder straps with adjustable sternum strap and load stabilizers
- Adjustable shoulder strap height.
- two drag handles and one carry handle
- small pocket for keys and valuables

Shown with red 1000D nylon and silver upholstery

THE JOULE SERIES

JOULE:

noun Abbr. J

A derived unit of energy, work, or amount of heat in the International System of Units. It is equal to the energy expended (or work done) in applying a force of one newton through a distance of one metre (1 newton metre or N·m), or in passing an electric current of one ampere through a resistance of one ohm for one second. It is named after the English physicist James Prescott Joule (1818–1889).

A joule is potential energy contained within a system. We see the act of chalking as the moment at which the body of a climber is poised to reach its full potential. We designed each product in the joule series with this in mind. In the case of the Kilojoule, we acknowledged that a chalkpot is meant to be used before stepping on the rock. This led to the Kilojoule, the first spillproof and dipable Chalkpot on the market. In the case of the Joule, we designed a wearable chalkbag that keeps itself in place ergonomically and while consolidating available chalk for easy access.

JOULE

Stock MSRP: \$20.00 USD

Custom MSRP: \$23.00 USD

The Joule is a classic worn chalkbag that is ergonomically designed to work with the physiology of a climber to stay stable and accessible in any position and concentrate chalk for easy access.

Features:

- Ergonomic design
- Quick deploy secure brush loop
- 1000 Denier Nylon body
- DWR treated Fleece liner
- All bags are made to order

Stock body shown in red and silver

KILOJOULE

Stock MSRP: \$33.00 USD

Custom MSRP: \$38.00 USD

The KiloJoule is a community chalkbag that is designed to be used with out fear of losing chalk. The a patent pending chalk retention system keeps chalk from spilling while allowing for a quick and easy chalking up before send.

“Whats the #1 climbing gear oxymoron? Chalkbag innovation. Or it used to be until Kinetik shattered that notion with the Kilojoule”

-Climbing magazine Gear guide 2015

Features:

- Patent pending Chalk retention system
- 1000 Denier Nylon and Mil. Spec Vinyl body
- Waterproof vinyl protects chalk from moisture on the ground
- Zips up into a compact, pack-friendly profile
- Double brush holder

Shown in red 1000 D and red vinyl
